**Free Mini Assessments!**

## Mini-Assessment Showcase

**Server Virtualization Mini Assessment** – For this assessment, SSI provides a *Virtualization Consultant* to meet with the customer for 1 day on-site attaining an overview of the customer's current hardware & software infrastructure, virtualization goals, current requirements. This is then followed up with a "Summary of Server Virtualization Recommendations" document and an estimate for potential products and services required for the customer to achieve the identified virtualization objectives. Server virtualization combined with HP Blade Server Technology is the premiere enabling technology for a truly **GREEN IT infrastructure**.

**Storage Mini Assessment** – During this assessment, SSI sends a *Storage Consultant* to meet with the customer for 1 day on-site assessing the customer's current storage environment, their anticipated data growth, any performance issues, existing back-up environment, use of management tools, and any additional storage requirements. The assessment data will be analyzed to create a "Summary of Storage Recommendations" document and an estimate for potential products and services, required for the customer to achieve the identified storage objectives.

**Messaging Mini Assessment** – With this assessment, SSI provides a *Messaging Consultant* to meet with the customer for 1 day on-site to gather an overview of the customer's current messaging environment. The goal is to analyze the current state of the customer's messaging environment, determine what if any problem areas exist, and/or assist with planning or implementation of migration plans. Other factors evaluated can include help identifying any compliance or archival requirements, evaluation of e-mail back-up and recovery options, and implementation of best practices. The collected data can then be used to further form a "Summary of Messaging Recommendations" document outlining potential paths to attain the identified messaging objectives along with an estimate for potential products and services.

**Application Virtualization Mini Assessment** – This assessment entails SSI sending an *Application Virtualization Consultant* meeting with the customer to spend 1 day on-site examining the customer's current application environment along with any virtualization initiatives or objectives. An analysis of current O/S's, Databases, Applications, and any unique dependencies will be used to determine which would be ideal candidates for Virtualization. This will facilitate the creation of a "Summary of Application Virtualization Recommendations" document including an estimate for any products and services necessary to deliver a first-rate virtualization strategy for the identified applications.

**Open Source Mini Assessment** - In this scenario an *Open Source Consultant* would be provided to meet with the customer for 1 day on-site getting an overview of the customer's computing operations and examining the client's specific needs. This data will be used to suggest areas where Open Source Products could be used in place of closed source and proprietary software. Products that could possibly be recommended include Red Hat, OpenSuse, Debian, Open Solaris, Apache, Tomcat, JBoss, MySQL, Postgresql etc. This data would then be combined to create a "Summary of Open Source Recommendations" document including an estimate for any products or services necessary to achieve the overall recommendation.

These assessment offerings provide significant value by providing an expert opinion about your current IT, Storage, and Virtualization Environment along with short, mid, and long term IT Goals and Strategies reviewed by our certified solutions consulting team at NO cost to you.
